1.1.2 Target group

These installation and operating instructions are intended for the operator and qualified personnel. They should be observed by all personnel working on the system.

Work on the system must only be carried out by personnel who have the relevant training and instruction.

1 User instructions

1.2 Guarantee and Liability

Guarantee and liability claims for personal and equipment damage are excluded, if they can be attributed to one or more of the following causes:

- Non approved application of the unit,
- non-observance of the installation and operating instruction,
- operating the unit with faulty safety equipment,
- continual operation despite a fault,
- improper installation, commissioning, operation and service of the unit,
- alterations to the unit,
- the installation of additional components, which are not intended for the use with the solar system,
- repairs, which have been carried out incorrectly,
- the use of non original Weishaupt parts,
- unsuitable media,
- defects in the inlet lines,
- acts of God.

2 Safety

2 Safety

2.1 Permissible application

The solar system is suitable for heating a heat transfer medium in a closed circuit by solar radiation. The ready mixed Tyfocor L, with frost protection up to -30 °C, is used as the heat transfer medium.

The system should only be constructed and operated with the designated control options.

It is not permitted to use shut off valves (exception: cap valves) between collector and expansion vessel.

Improper use could:

- endanger the health and safety of the user or third parties,
- cause damage to the system or other material assets.

2.2 Safety measures

Safety relevant fault conditions must be eliminated immediately.

Observe TYFO EU Safety Datasheet for heat transfer medium Tyfocor L.
See www.weishaupt.de, Print No. 860001xx

2.2.1 Normal operation

- All labels on the system must be kept in legible condition,
- stipulated settings, service and inspection work should be carried out at regular intervals.

2.2.2 Electrical connection

For all work carried out on live parts:

- Observe the accident prevention instructions BGV A3 and adhere to local directives,
- tools in accordance with EN 60900 should be used.

2.3 Alterations to the construction of the equipment

All conversions require written approval from Max Weishaupt GmbH.

- Use only additional components which are intended for use with solar systems,
- use only original Weishaupt replacement parts.

2.4 Disposal

Dispose of all materials used in a safe and environmentally friendly way. Observe local regulations.

3 Product description

K4

Flat roof vertical with integrated collectors

3 Product description

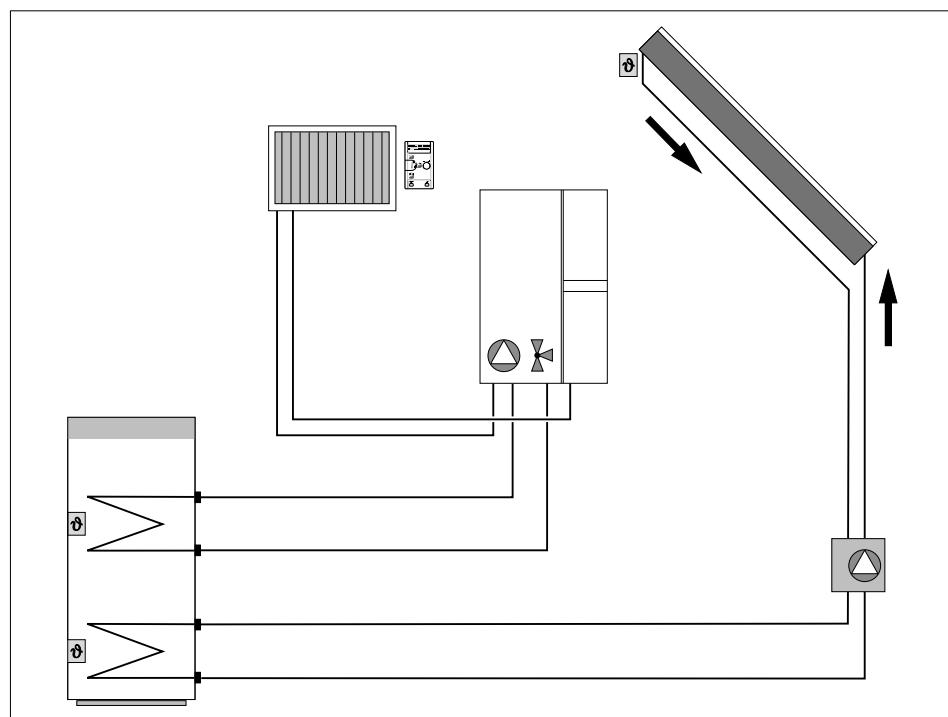

3.3 Function

Temperature sensor

The temperature sensor measures the temperature in the collector or in the water heater and transmits this to the Solar controller.

System pipework

The heat is transferred to the water heater in a closed circuit via a system pipework and fittings.

Solar controller

The solar controller is used to control the circulation pump. A temperature difference between water heater and collector is programmed into the controller.

Circulation pump

If, after reaching the temperature difference set in the solar controller, the temperature in the collector:

- is higher than in the water heater, the pump is switched on,
- is lower than in the water heater, the pump is switched off.

3 Product description**3.4 Technical data****3.4.1 Approval data**

4 Installation**4 Installation****4.1 Installation conditions**

Observe rules and standards of the German roofers trade and local regulations.

Observe regulations for lightening protection (see VDE V0185, Part 1 to 5).

- ▶ Earth flow and return pipework of the solar circuit with minimum 16 mm² CSA cable at the potential equalisation rail.

- ▶ Ensure the roof construction is in tip-top condition.
- ▶ Check design of substructure.
- ▶ Check bearing capacity of roof.
- ▶ Check hydraulic layout of collectors.
- ▶ Check layout and sizing of manifolds.
- ▶ Check alignment and shading of collectors.
- ▶ Leave edge of area free for high wind load and safe accessibility.
- ▶ Avoid copper plating above the collector area due to corrosion.

It must be possible for the snow to slide off unobstructed.

- ▶ If a snow guard or other obstacle is present, check snow load.
- ▶ Reinforce substructure or use multiple roof hooks.

- ▶ Check that the permissible pitch is observed.

	permissible roof pitch
On roof	15° ... 70°
Flat roof	max 6°
In roof	23° ... 70°
In roof with special accessories	15° ... 22°

To avoid unnecessarily high thermal loading of the collectors, commission the solar system as soon as possible after installation.

4 Installation

4.2 Transport

Damage to the collectors due to incorrect positioning

Frame is bent.

Glass pane is damaged.

- ▶ Let the collector rest on an even surface or on its corners only.
-

- ▶ Always transport collector with the glass pane facing upwards.
 - ▶ Do not stand the collector on its connection points.
 - ▶ If necessary place on wooden blocks.
-

Further installation instructions are described in the abbreviated instructions enclosed.

5 Installation

5 Installation

5.1 Hydraulic connection

Pipework installation

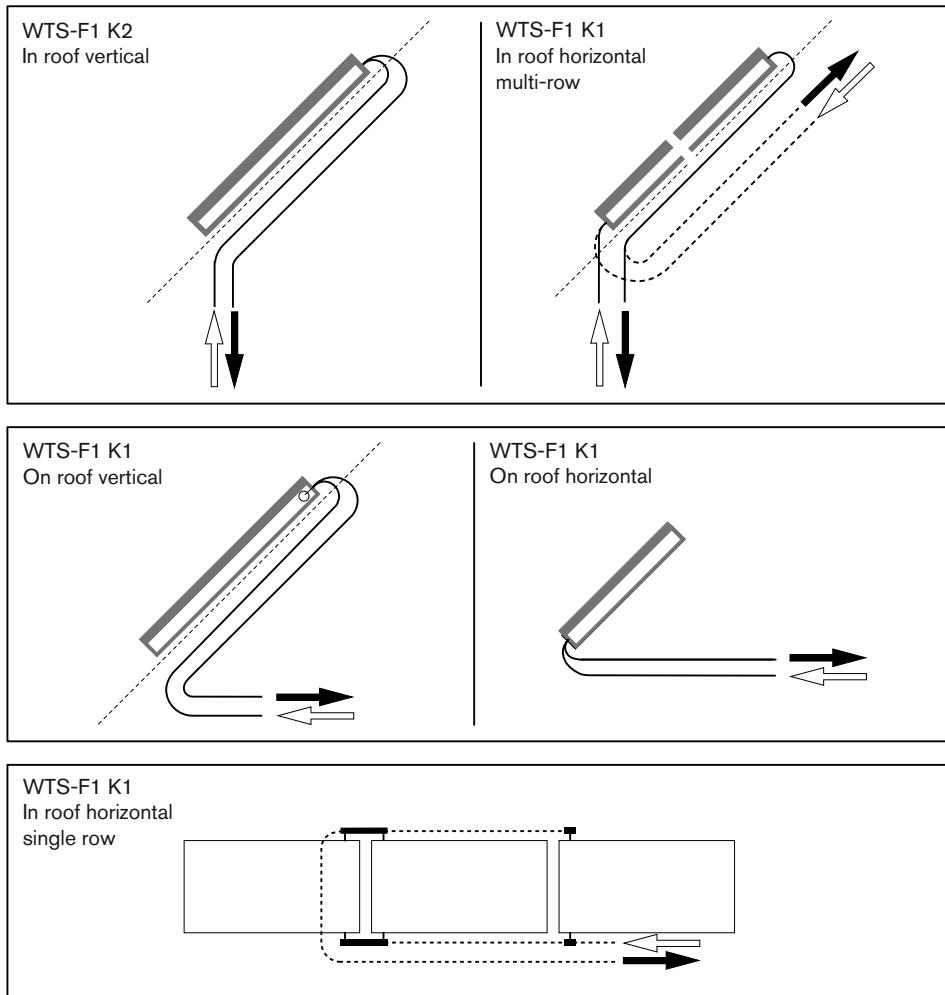

The collector's connection unions are self sealing.

- Do not use additional seals.

Bending radius of stainless steel corrugated tube: 40 mm.

- Install the pipework to the water heater without siphon bends.
- ✓ The pipework can be drained for servicing.

Safety valve

- Install vent line securely to the safety valve of the solar pump assembly.
- Place collecting vessel under the vent line.

6 Commissioning

6 Commissioning

6.1 Prerequisite

The commissioning may only be carried out by qualified personnel.

- ▶ Please check that all installation work has been completed prior to commissioning.

6 Commissioning

6.2 Set expansion vessel

Pressure increase due to closed cap valve

System could be destroyed

- Only close cap valve if:
 - sun radiation is limited (e. g. in the morning),
 - the collectors are covered.

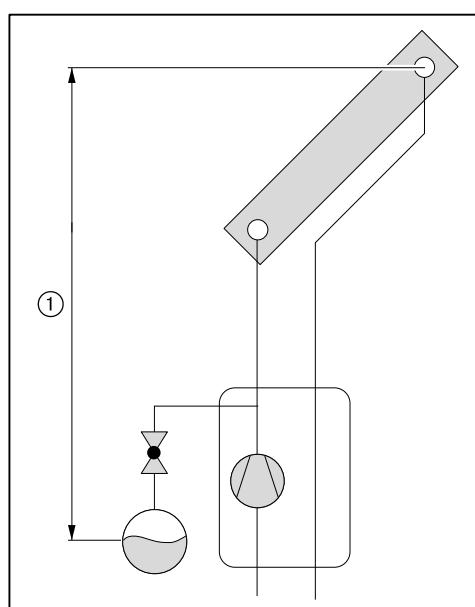

The expansion vessel is filled with Nitrogen at the factory and preset to an inlet pressure of 2.5 bar.

Set inlet pressure

The inlet pressure of the expansion vessel should be set prior to filling the system.

The inlet pressure is calculated from the static height ① of the system.

The static height is measured from the connection of the expansion vessel to the highest point of the system.

- Determine inlet pressure using the table and note down.
- Check inlet pressure of the expansion vessel and if necessary adjust to the value determined.

Height	5 m	10 m	15 m	20 m	25 m
Supply pressure	1.5 bar	2.0 bar	2.5 bar	3.0 bar	3.5 bar

Select 1.5 bar if the static ceiling is less than 5 metres.

A line vessel should be considered for:

- roof heating systems,
- short connection lines to the solar panels.

6 Commissioning**6.3 Commissioning****1. Fill, rinse and vent collector circuit**

Danger of getting scalded when commissioning during intense sun radiation
Hot heat transfer medium can cause scalding.

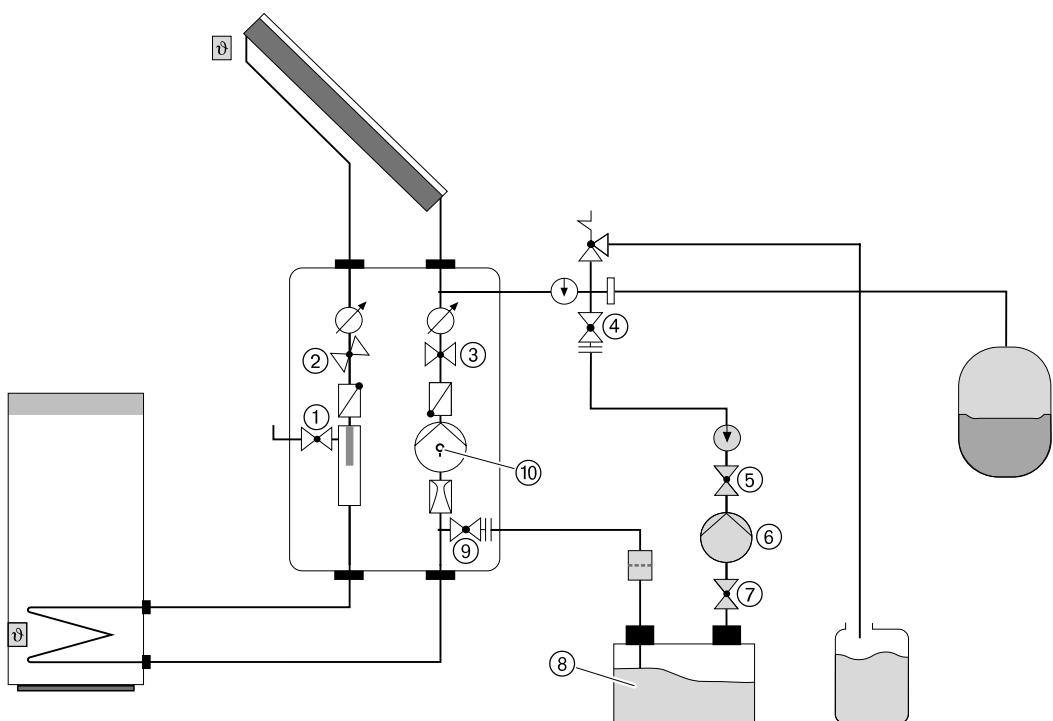

- Commissioning of the solar system should only be carried out when sun radiation is low (e. g. in the morning) or with the collectors covered.

Damage to the heat transfer medium when filling during intense sun radiation
The function of the heat transfer medium can be affected when filling at high temperatures.

- The solar system should only be filled when sun radiation is low (e. g. in the morning) or with the collectors covered.

- Connect jet pump ⑥ with full heat transfer medium canister ⑧ to tap ④ and tap ⑨.
- Open tap ⑤, ⑦ and ⑨ and set tap ② to 45°.
- Close tap ③
- Switch on jet pump.
- Briefly operate tap ⑨ and return ball valve ③ several times to increase the pressure.
- ✓ The last air bubbles are expelled.
- Flush solar system for at least 20 minutes.
- ✓ Heat transfer medium exits the drain hose without bubbles.
- Vent solar pump via vent screw ⑩.
- Vent inlet pipe via vent screw ①.
- Close tap ④ and ⑨.
- Switch off jet pump.
- Open tap ② and ③.

6 Commissioning

- ▶ Check and document frost protection content.

The frost protection content must be sufficient for the lowest temperature expected at the relevant system location.

Example

- ▶ Enter a frost protection value of 5 to 10 K higher than that of the measured frost protection content at the solar controller WRSol under Change setting.

Frost protection content

-30°C

Set parameter to

-20°C

(Presetting solar controller)

2. Check soundness

- ▶ Check soundness of all connection points and taps.
- ▶ Do not exceed maximum operating pressure (see Ch. 3.4.6).

3. Set system pressure

- ▶ Set system pressure 0.3 bar above the selected inlet pressure of the expansion vessel.
- ▶ If pressure needs to be reduced, open outlet tap on flow meter and let heat transfer medium flow back into the canister via the outlet hose.
- ▶ Set indicator of pressure gauge to the system pressure.
- ▶ Place empty canister of heat transfer medium under the vent line.

	System height ⁽¹⁾					
	5 m	10 m	15 m	20 m	25 m	30 m
Inlet pressure of expansion vessel	1.5 bar	2.0 bar	2.5 bar	3.0 bar	3.5 bar	4.0 bar
System pressure	1.8 bar	2.3 bar	2.8 bar	3.3 bar	3.8 bar	4.3 bar

⁽¹⁾Difference between highest system point and expansion vessel

6 Commissioning**4. Set nominal volume flow**

The recommended nominal volume flow should be achieved at an average heat transfer medium temperature of 50° C. Lower temperatures lead to decreased volume flow (see table).

In conjunction with speed control it is possible that the display of the flow meter pulsates in the lower pump speed range.

- ▶ Calculate average temperature:
 - calculate average value from flow and return temperature – or –
 - calculate average value from collector temperature and temperature at the bottom of the storage tank.
- ▶ Nominal volume flow see table.
- ▶ Switch on WRSol controller in manual operation, do not alter standard pump rating setting of 100 %.
- ▶ Fully open flow meter at pump assembly.
- ▶ Set pump to stage 1 and determine volume flow at flow meter.
- ▶ Increase pump stage until the nominal volume flow determined has been achieved and/or is exceeded.
- ▶ Set solar controller to automatic operation.

Average temperature	K1 and K2 Number of collectors								
	2	3	4	5	6	7	8	9	
0 °C	45 l/h	68 l/h	90 l/h	113 l/h	135 l/h	158 l/h	180 l/h	203 l/h	
10 °C	54 l/h	81 l/h	108 l/h	135 l/h	162 l/h	189 l/h	216 l/h	243 l/h

7 Shutdown

7 Shutdown

The system remains in operation during holidays and prolonged periods of absence.

-
- ▶ Shut down the system for service work.
 - ▶ Switch off the solar pump at the solar controller.

8 Servicing

8 Servicing

Electric shock when working with voltage applied

The consequence is serious injury or death.

- ▶ Isolate unit prior to carrying out service work and protect against accidental reconnection to the mains.

Danger of scalding when servicing during intense sun radiation

Hot heat transfer medium can cause scalding.

- ▶ Servicing of the solar system should only be carried out when sun radiation is low (e. g. in the morning) or with the collectors covered.

Danger of getting burned on the unit

Hot components can lead to burns.

- ▶ Allow components to cool before touching.

The end user should ensure that the solar system is serviced at least once a year. Service work must only be carried out by qualified personnel with the relevant expertise. Depending on site conditions it may be necessary to inspect the installation more frequently.

Weishaupt recommends a service contract is entered into to ensure regular inspections.

Prior to servicing

- ▶ Inform operator.
- ▶ Switch off mains switch of installation and safeguard against accidental reactivation.

Following servicing

- ▶ Check soundness of all connection points and taps.
- ▶ Check function.

8 Servicing**8.1 Service plan**

Components	Criteria	Service procedure
Heat transfer medium	No frost protection	► Replace
	pH value < 7	► Replace
	Fluffy consistency and pungent odour	► Replace
Collectors	Heavy soiling	► Clean
	Damage	► Replace
Substructure	Heavy soiling	► Clean
	Damage	► Replace
System pipework	Damaged/leaking heat transfer medium	► Make tight ► Replace if necessary
	Damage to insulation	► Repair insulation
Vent line	Leaking heat transfer medium	► Check expansion vessel
Thermostatic mixer valve	Temperature too low	► Check function. ► Clean ► If necessary replace thermostat element.
Non return valve	Heat transfer medium circulating without pump operation	► Replace
Safety valve	Defective	► Replace
Expansion vessel	Incorrect inlet pressure	► Adjust inlet pressure
Temperature sensor	Value not plausible	► Measure resistance value. ► Replace if necessary
Circulation pump	Defective	► Replace
Vent	Air in the system	► Vent
System pressure	Commissioning value not maintained	► Adjust
Nominal volume flow	Commissioning value not maintained	► Adjust

8.2 Replacing heat transfer medium

Observe notes on servicing (see Ch. 8).

The heat transfer medium Tyfocor L ensures frost protection of the solar system down to -30 °C. It is possible that the heat transfer medium becomes dark over time. Replacement is only necessary to the criteria in the service schedule.

- Completely drain the system.
- Fill system with new heat transfer medium (see Ch. 6.3).

9 Accessories**9 Accessories****Brush strip**

For positive alignment of ridge plate to the roof tiles.

2.01	Collector connection M16 x 1 x 233 with insulation (only for 2 panel field 2x1)	480 020 00 36 2
2.02	Repair sealing washer	on request
2.03	Clamping ring set 12 (Serto)	480 020 00 01 2
2.04	Cable entry SNAP 5-7	480 020 00 04 7
2.05	Collector connection M16 x 1 x 41	480 020 00 10 7
2.06	Insulation 22/13	480 020 00 23 7
2.07	Glass securing seal for frame WTS-F1	480 020 00 03 7
2.08	Solar glass 2040 x 1182 x 3.2	480 010 01 35 7
2.09	Glazing block 10 x 2 x 100	480 020 00 02 7
2.10	Glass overlay seal WTS-F1	480 020 00 01 7
2.11	Sheet metal clip	480 020 00 75 7
2.12	Clout nail 2.5 x 2.5 hot-dip galvanised	480 010 02 39 7
2.13	Ridge plate type H Ridge plate type H 15 ... 22° roof pitch	480 020 00 53 7 480 020 01 01 7
2.14	Impact cover to ridge plate Impact cover to ridge plate (15 ... 22° roof pitch)	480 020 00 55 7 480 020 01 06 7
2.15	Chipboard screw Torx 6 x 30 galvanised	480 020 00 72 7
2.16	Connection seal for frame	480 020 00 80 7
2.17	Drainage plate ridge side Drainage plate ridge side (15 ... 22° roof pitch)	480 020 01 31 7 480 020 01 05 7
2.18	Drainage channel 1-IH Drainage channel 2-IH Drainage channel 3-IH Drainage channel 1-IH (15 ... 22° roof pitch) Drainage channel 2-IH (15 ... 22° roof pitch) Drainage channel 3-IH (15 ... 22° roof pitch)	480 020 00 84 7 480 020 00 85 7 480 020 00 86 7 480 020 01 07 7 480 020 01 08 7
		480 020 01 09 7
2.19	Spacer WTS-F1 in roof	480 020 01 62 7
2.20	Side plate top right Side plate top right (15 ... 22° roof pitch)	480 020 00 63 7 480 020 01 04 7
2.21	Side plate centre right type H	480 020 00 61 7
2.22	Side plate bottom right type H	480 020 00 57 7
2.23	Cover plate top left / bottom right type H	480 020 00 68 7
2.24	Cover plate bottom left / top right type H	480 020 00 67 7
2.25	Cover plate single row type H	480 020 00 64 7
2.26	Cover plate centre type H	480 020 00 66 7

Product		Description	Performance
	W-Burners	The compact series, proven millions of times over: Economical, reliable, fully automatic. Gas, oil and dual fuel burners for domestic and commercial applications. The purflam burner gives almost soot-free combustion of oil with greatly reduced NO _x emissions.	Up to 570 kW
	Monarch and industrial burners	The legendary industrial burner: Tried and tested, long lived, clear construction. Gas, oil and dual fuel burners for district heat provision.	Up to 11,700 kW
	multiflam® burners	Innovative Weishaupt technology for large burners: Minimal emission values particularly at ratings over one megawatt. Oil, gas and dual fuel burners with patented fuel distribution system.	Up to 17,000 kW
	WK industrial burners	Modular powerhouses: Adaptable, robust, powerful. Oil, gas and dual fuel burners for industrial plant.	Up to 22,000 kW
	Thermo Unit	The Thermo Unit heating systems from cast iron or steel: Modern, economic, reliable. For environmentally friendly heating. Fuel: Gas or oil as desired.	Up to 55 kW
	Thermo Condens	The innovative condensing boilers with the SCOT system: Efficient, low in emissions, versatile. Ideal for domestic heating. Floor standing gas condensing boiler with ratings of up to 1200 kW (cascade), for higher heat demands.	Up to 1,200 kW
	Heat pumps	The heat pump programme offers solutions for utilisation of heat from air, soil and ground water. The systems are suitable for refurbishment or new builds. It is possible to use several heat pumps in cascade operation.	Up to 130 kW
	Solar systems	Free energy from the sun: Perfectly coordinated components, innovative, proven. Pleasantly shaped flat roof collectors to support heating and of domestic water	
	Water heater / energy reservoir	The attractive domestic water heating range includes classic water heaters which are supplied through a heating system and energy reservoirs which can be fed through solar systems.	
	Control technology / building management	From control panels to complete building management systems – at Weishaupt you can find the entire spectrum of modern control technology. Future oriented, economical and flexible.
